GUI Octave Torrent [Win/Mac] (Latest)

GUI Octave is an application designed as the Graphical User Interface for Octave, the program that is able to solve linear and nonlinear problems, as well as perform other numerical experiments, such creating a matrix, perform arithmetic operations, and use variables, expressions, statements, functions, and scripts. Unfortunately, the tool can only be run using the command-line console, and this is why GUI Octave comes in handy for all users who need to perform various operations with minimum effort. GUI Octave sports a clean and straightforward interface that gives users the possibility to upload variables into the working environment from files with the following formats: MAT, HDF5, FHDF5, BIN, FBIN, ZIP, or plain text format. The variables can be saved to the same file formats. What's more, you can delete, duplicate, rename, or select all the variables, as well as cut, copy, paste, or delete the selected information. GUI Octave features an auto-complete option when it comes to writing commands or functions and syntax highlighting options. Plus, you can use the built-in editor for creating, editing, running, and analyzing Octave language statements. The application enables users to sort variables by name, size and class, check their contents, run Octave language statements, view a history with the written statements, and automatically check for updates. Additionally, you can make the program play sound notifications when it detects errors, limit the number of lines for the command operations, automatically save the information at a specified time, as well as change the font style, size and color for strings, keywords, numbers, commands, comments, and others. To sum things up, GUI Octave proves to be quite helpful for all users who have experienced difficulties in running the Octave command-line console. Since it serves as the interface for the tool, it definitely simplifies the entire process of performing numerical computations.

Q: Searching for files for formatting with a regex but not the whole string I use regular expressions a lot to check if content is in a format I need or not. Sometimes I need to search for a full word or phrase or line of a file to check if it contains a specific string and sometimes I need to search only for content that follows a certain format and I have to use the inversion for doing that and the problem is that it looks for the full content.
