Category:Virtual synthesizers Category:Windows-only softwareUltra Base Ultra Base is a mixture of active ingredients used as a treatment for insect stings, particularly of bees, hornets and wasps. It is available in four strengths, non-drowsy and drowsy. Ultra Base is prepared from concentrated propolis. Propolis is a resinous substance that forms around certain insects. Many bee species produce propolis, including European bees and the native stingless bees. The propolis is made of beeswax, resins, and other bee secretions. In addition to its antibacterial, anti-inflammatory, and antimicrobial properties, propolis has been found to be an insect repellent and antioxidant. Studies have shown that propolis may help prevent the spread of some diseases by keeping insect populations low. The first use of propolis in treatment was found in the United States in 1959. It has since gained in popularity in many countries and has been used to treat insect stings for over two decades. However, propolis is not available in many countries, and there has been concern that propolis does not contain all of the active ingredients needed for use in medicine. Ultra Base consists of propolis extract, water, and polysorbate 80. Ultra Base was first made available in the United States in 1998. Uses Ultra Base is used to treat bee, wasp and hornet stings. Inhalation of a spray may be helpful for chemical or biological exposures, but can be dangerous if improperly applied. Ultra Base does not contain insecticide. Instead, it is used as an external treatment. It may be used by mouth or rubbed on the affected area. Ultra Base cannot be used for all stings. Contraindications Consult a healthcare provider before using Ultra Base if you have a history of allergies or asthma. For hornet and wasp stings, Ultra Base can cause a severe immune reaction known as anaphylaxis. Side effects The most common side effects of Ultra Base include: itching, pain, redness and swelling at the site of an insect sting. History Research on propolis began in the early 1900s. The earliest documented use of propolis was discovered in the 1930s, when a medical journal published records of the effects of bee propolis on humans. The earliest known preparation of propolis for medicinal use was discovered in 1914. References 79a2804d6b
