I wasn't all that thrilled at first of Lightroom. It took me a week to get used to, but that was sort of a slow process. There were still things I couldn't do, quick fixes I needed to employ, and things I'd find I couldn't even get to without outside help, even after the first week. But, that was fun. It was easy to learn, and all new ideas seem like magic for the new user. All photos that I captured with my iPhone 7 Plus in the camera app came out perfect and ready to go. Photoshop Elements has a little to offer in that regard, but you certainly won't notice that. I made a few modifications before exporting, but, other than that, it wasn't a problem. Some of the more simple photo adjustments, such as cropping, required a little more than I expected, of course, but the vast majority of my adjustments were perfect. The only quality that I had to worry about was the resolution. Luckily, I was able to change that by staying within the limits of the camera app. I could've, in theory, managed to add some options to choose a higher resolution from the camera, or go from the camera app's resolution to a larger one easily, but that goes beyond the purpose of this article. Lightroom has you covered. Adobe has introduced some new features in the elements related to the Photoshop cloud service. Previously you would have to give the photographer access to your Album in the Photoshop cloud service to be able to work on it, now the browser will automatically open that nice Photoshop icon instead and you can do your thing on design synced work.
